

FIXED CONCRETE PLANT TTC-B-200S

COMMERCIAL OFFER				
No	EQUIPMENTS	DESCRIPTION	Qty	
1.	Aggregate feeding bin	4x40 = 160m ³	1	
2.	Weighing Bunker	3m³	1	
3.	Aggregate feeding conveyo	1000x4000 mm	1	
4.	Aggregate Transfer Conveyor	1200x32000 mm	1	
5.	Mixing Unit Equipment			
5.1.	Aggregate Bunker	6m³		
5.2.	Cement Weighing Hopper	3000 kg		
5.3.	Water weighing - batching hopper	1500 lt	1	
5.4.	Additive weighing -batching hopper	50 kg		
5.5.	Compressor	500 lt 7,5kW		
5.6.	Pneumatic system			
6.	Twinshaft Mixer Hardox Side walls armor , Ni-Hard Paddle armor	7500 litres / 5000 litres	1	
7.	Automation System - Air Conditioned Cabin		1	

Technicial Specifications

1. Aggregate Hopper

Machine Name : Aggregate Hopper

Number of Bunker Hopper : 4 Chamber Volume : 40m³

Total Volume : 160m³ (4*40m³)

Bunker Kapakları : 5mm thick, ST37-A1 Quality,

It is produced with Sheet Metal in Twisted Trapeze

Form.

Bunker Covers are bolted to each other and wedged

to the chassis.

It is hinged on the chassis so that it goes on the

Number of Discharge Shots : There are 4 Outlet Chutes for each chamber. The

funnel part is 6mm thick. Discharge chute is produced from 8mm thick ST37 A1 Quality Sheet Metal.

Discharge Cover : It is supported by a joint bearing.

It is produced from 10mm thick ST37 A1 Quality

Sheet.

vibromotor : 2 x 0,37 kW 1500 rpm Vibro Motor

Pneumatic System : 1 Pneumatic Piston is used for each outlet cover. Top

class products such as Expflex brand pistons and

valves are preferred.

Platform : There is a maintenance platform and a guard system

around the bunker.

2. Aggregate Weighing Hopper X 2 Pcs.

Machine Name : Weighing Bunker

Volumetric Capacity : 3m³
Weighing Capacity : 4000 kg

Body : It is produced with 6mm thick, ST37-A1 Quality Sheet

Metal by welded manufacturing method.

Loadcell : 4 pieces of 5 Ton Flat Bar are used.

Vibromotor : one 0,27kW 1500rpm Vibromotor

breakwater : There is a breakwater that can be adjusted in height

to adjust the flow rate.

Front cover :

In order to interfere with the discharge speed of the material, there is a mechanically adjustable cover in the discharge direction of the collection conveyor.

weighing system : It is coupled with the collection conveyor. Suspended

together with loadcells, it forms the aggregate

weighing system.

3. Aggregate Weighing Conveyor X 2 Pcs

Machine Name : Aggregate Weighing Conveyor

Dimensions : 1000x4000 mm
Engine : 7.5 kW Gearmotor

Bearing : SKF or FAG Brand SNL Type Drive Bearing

SKF or FAG Brand UCT Type Tail Bearing

Drive Drum : Ø324 - 10mm Rubber coated

Tail Drum : Ø274

band : 4 kat 4/2 EP125 , V type Conveyor Chassis : "8mm thick, ST37-A1 Quality,

It is produced by welded fabrication with Twisted

Sheet Metal. "

Scraper V type : 1 piece is used to clean the inside of the tape.

Direction Reel : Belt slippage is prevented with a total of 4 directional

rollers with a diameter of \emptyset 89 mm at the front and a diameter of \emptyset 60 mm at the rear.

diameter of ϕ 60 mm at the rear.

Carrier Roller : 3 roll system is used. Side rolls are angled at 30°. The

rolls are Ø89x325 mm.

Return Roll : It is Ø89x1020mm in size.

4. Aggregate Transfer Conveyor

Machine Name : Aggregate Transfer Conveyor

Dimensions : 1200x32000 mm Engine : 37kW 1500rpm

Reducer : DİŞSAN DG2-320 Reducer

Brake Type

Bearing : SKF or FAG Brand SNL Type Drive Bearing

SKF or FAG Brand UCT Type Tail Bearing

Drive Drum : Ø324 - 10mm Rubber coated

Tail Drum : Ø274

band : 4 kat 4/2 EP125, V type

Conveyor Chassis : It is produced from box profile, with a cage system

design, by welded manufacturing.

Scraper V type : 1 piece is used to clean the inside of the tape.

Direction Reel : Belt slippage is prevented with a total of 4 directional

rollers with a diameter of \emptyset 89 mm at the front and a

diameter of Ø60 mm at the rear.

Carrier Roller : 3 roll system is used. Side rolls are angled at 30°. The

rolls are Ø89x400 mm.

Return Roll : It is Ø89x1220mm.

Platform : There is a one-sided walkway and guardrail system

along the Conveyor Line.

Conveyor Protection : The upper part of the belt conveyor is closed in order

to protect it from all kinds of external environment. The aggregate is transported up to the mixer upper

group in a closed environment.

5. MIXING UNIT

"The main carrier chassis pouring height is 4250 mm and its design as welded construction from HEA, NPU and IPE Profiles is made of high quality steel, taking into account DIN standards and ISO 9001 quality standard.

All the components described below are located on the same frame equipped with the platform, ladder and railings."

Aggregate Bunker : "6 m³ capacity

Pneumatic Side Valve

1 Piece, MVE100/3 Vibromotor"

CEMENT HOPPER : 3000 kg capacity

3x2000 kg Loadcell

1 Piece, MVE100/3 Vibromotor Ø300 mm Pneumatic Valve Pneumatic Valve : 1/4" SMS

Driver: CP 101

WATER WEIGHTING HOPPER : 1500 Liter Capacity

2x1000 kg Loadcell Ø200 mm Pneumatic Valve

Pneumatic Valve : 1/4" SMS

Driver: CP 101

ADDITIVE WEIGHTING : 50 kg Capacity

HOPPER S Type 100kg Loadcell 1" Actuated Valve

Pneumatic Valve : 1/4" SMS

COMPRESSOR : "827 I/min Flow Rate

7,5 kW Engine500 l Tank Volume6-8 bar Working Pressure"

6. Twinshaft Mixer | 7500 lt / 5000 lt

Origin Türkiye Model TTC-TS-5.0 **Dry concrete Capacity** 7500 lt **Compacted Capacity** 5000 lt

2 Pcs 90 kW Motor **Engine and Reducer** 2 Pcs Ermaksan

lining Guard : Ni-Hard / Hardox 500

> In the interior where the mixing takes place, the entire body surface is covered with wear-resistant replaceable linings. Thus, it has a very long working

life.

Paddles Ni-Hard Casting

Mixing System The mixing process is carried out by two shafts

rotating in opposite directions on which the arms and pallets are mounted. Arms and pallets connected to these shafts allow the materials required for concrete to be mixed homogeneously as soon as possible. There is no area that the pallets do not scan in the

internal volume of the mixer.

Minimum Duration It is very important to complete the ready mixed concrete production as soon as possible. The full

contact of cement and aggregate with each other ensures that the concrete has a high strength and the

expected quality is achieved.

Auto Lubrication System With 4 Point Lubrication, it comes pre-installed on the

> mixer. When lubrication is not possible thanks to the sensors located at the required points, it gives an audible and light warning on the computer.

Body : The body is produced with a welded joint in a high-

> strength structure with its design and material quality. The body is designed to be highly resistant to the tensile forces created by two separate shafts during

mixing.

Hydraulic System : The mixer outlet cover is connected to the hydraulic

piston. This hydraulic piston is also driven by a power unit. By being coupled to the automation system, full opening and full closing of the discharge cover is

ensured at the desired time.

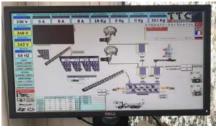

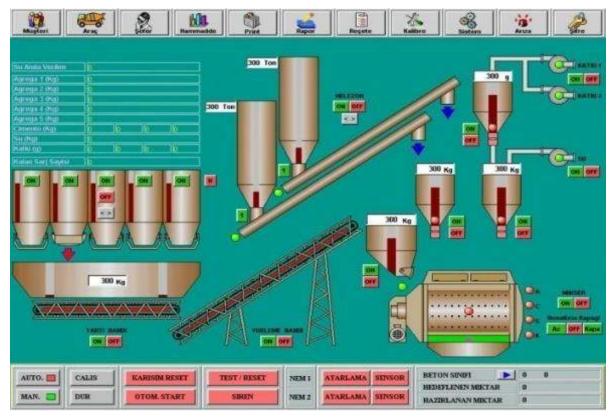

7. AUTOMATION SYSTEM

PLC	:	Control management operations are carried out using the PLC. Thanks to the PLC control, high weighing and dosing accuracy is obtained, including at high productivity, and an error control algorithm
fuse	:	The MCC and the control panel are equipped with electrical fuses and are designed to operate in harsh conditions
Operating Panel		All kinds of parameter settings, operations with receipts and with calibration can be carried out from the screen of the operator panel. You can get reports on operations, product and errors.
Operating System		The system can be turned on automatically or manually from the screen of the mimical diagram. Voltage and alperage data can be tracked on digital screens.
SCADA	:	Using a computer, operations such as management control, reports of all kinds, error reports and others are carried out. Scada system package includes an animation screen, computer, printer and UPS.
Reporting	:	Possibility of archiving and tracking of receipts,

invoices, invoices, customers and vehicles for 1 year.

"TTC Engineering, with its sectoral experience of more than 20 years, ensures that the highest quality concrete can be produced in accordance with the recipe, thanks to the automation system which is specially designed.

The fully automatic automation system with software, hardware and panel, which allows all equipment to work in sync, ensures that the concrete is produced in the desired recipe with the fastest and most accurate mixture.

It continuously pulls data from weigh batches. With the continuous processing of these data, it ensures that the products in the concrete recipe are delivered to the mixer correctly in order to produce the concrete with the desired properties. It ensures the operation of bunker covers, belt motors, mixer motors, scale flaps, cement auger at the right time."
